has a justified reputation for its  
sharp teeth and strong jaws

## Mincer Plates & Knives

## Bandsaw Blades

You need the leading edge in cutting technology to increase your operating performance and reduce costs. You need the Atlantic Edge. All our blades are manufactured from the highest quality steels and sharpened with Seeded Gel grinding wheels to ensure a smooth finish, a high resistance to breakage, and unmatched uniformity and blade life. Drawing from years of experience in sharp tooth design, our engineers have developed a choice of tooth shapes, blade thicknesses and blade widths to meet retail cutting as well as processing plant needs.

Our blades range from a 0.300mm (0.012") thick waste saver blade to a sturdy 0.635mm (0.025") thick beef breaking blade. Each blade is individually packaged in a corrosion inhibiting colour coded safety wrapper, clearly identifying its type and size.

### Handsaw Blades

As with our bandsaw blades, only the finest quality materials are used. Precision grinding with Seeded Gel wheels gives the tooth form its accurate finish with continuous Quality Control procedures ensuring uniformity of standard.

Blades are offered in all popular lengths from 40.5cm (16") to 75cm (30") individually packaged in a corrosion inhibiting safety wrapper.

### Handsaw Frames

A top-quality blade would be of little use without a top quality frame. Our hardened stainless steel or aluminium frame incorporates a moulded handle and a camlock action ensuring correct tension is maintained throughout use. The unique design allows for a rigid but light cutting tool.

## Cutlery Sharpener

The **Cutlery Sharpener** offers a fast, easy means of lightly sharpening or completely reconditioning cutlery blades to a like-new edge.

Strong aluminium precision castings and all ballbearing construction provide easy portability and years of carefree service. The aluminium oxide abrasive belt is easily aligned and automatically tensioned. Knife rest and calibrated angle adjuster helps the beginner or professional to produce sharp, long-lasting edges at pre-determined bevels.

The enclosed belt housing traps grit. For best results, use only Atlantic belts.
